

St Ann's Heath Junior School – Science knowledge progression

Curriculum Intent

- Prepare our children for life in an increasingly scientific and technological world today and in the future.
- Equip our children with knowledge, skills and understanding outlined in the Science National Curriculum.
- Nurture children's curiosity about the world around them and inspire future scientists.
- Promote scientific enquiry and ensure our children are taught the skills they need to find out more about the world and how it works.
- Provide practical experiences to encourage and explore areas of science.
- Recognise working scientifically skills and use these in science lessons and any application of science.

	KS1	Year 3	Year 4	Year 5	Year 6
Plants	identify and name a variety of common wild and garden plants, including deciduous and evergreen trees	 identify and describe the functions of different parts of flowering plants: roots, stem/trunk, leaves and flowers 			
	 identify and describe the basic structure of a variety of common flowering plants, including trees 	 explore the requirements of plants for life and growth (air, light, water, nutrients from soil, and room to 			
	observe and describe how seeds and bulbs	grow) and how they vary from plant to plant			
	 grow into mature plants find out and describe how plants need water, light and a suitable 	 investigate the way in which water is transported within plants 			

	temperature to grow and stay healthy	 explore the part that flowers play in the life cycle of flowering plants, including pollination, seed formation and seed dispersal 			
Animals including humans	 identify and name a variety of common animals including fish, amphibians, reptiles, birds and mammals identify and name a variety of common animals that are carnivores, herbivores and omnivores describe and compare the structure of a variety of common animals (fish, amphibians, reptiles, birds and mammals including pets) identify, name, draw and label the basic parts of the human body and 	including humans, need the right types and amount of nutrition, and that they cannot make their own food; they get	 describe the simple functions of the basic parts of the digestive system in humans identify the different types of teeth in humans and their simple functions construct and interpret a variety of food chains, identifying producers, predators and prey 	describe the changes as humans develop to old age	 identify and name the main parts of the human circulatory system, and describe the functions of the heart, blood vessels and blood recognise the impact of diet, exercise, drugs and lifestyle on the way their bodies function describe the ways in which nutrients and water are transported within animals, including humans

	say which part of the body is associated with each sense • notice that animals, including humans, have offspring which grow into adults • find out about and describe the basic needs of animals, including humans, for survival (water, food and air) • describe the importance for humans of exercise, eating the right amounts of different types of food, and hygiene		
Materials and their properties	 distinguish between an object and the material from which it is made identify and name a variety of everyday materials, including 	compare and group together everyday materials on the basis of their properties, including their hardness, solubility, transparency, conductivity (electrical	

wood, plastic, glass, metal, water, and		and thermal), and response to magnets	
rock		know that some	
 describe the simple physical properties of a variety of everyday materials 		materials will dissolve in liquid to form a solution, and describe how to recover a substance	
compare and group		from a solution	
together a variety of everyday materials on the basis of their simple physical properties	•	use knowledge of solids, liquids and gases to decide how mixtures might be separated, including through	
identify and		filtering, sieving and evaporating	
compare the suitability of a		evaporating give reasons, based on	
variety of everyday materials, including wood, metal, plastic, glass, brick, rock, paper and cardboard for		evidence from comparative and fair tests, for the particular uses of everyday materials, including metals, wood and plastic	
particular uses • find out how the	•	demonstrate that	
shapes of solid		dissolving, mixing and changes of state are	
objects made from some materials can		reversible changes	
be changed by		 explain that some changes result in the 	
squashing, bending,		formation of new	
twisting and		materials, and that this	
stretching		kind of change is not	

Seasonal Changes	 observe changes across the 4 seasons observe and describe weather associated with the seasons and how day length varies 		usually reversible, including changes associated with burning and the action of acid on bicarbonate of soda	
Living Things and their Habitats	 explore and compare the differences between things that are living, dead, and things that have never been alive identify that most living things live in habitats to which they are suited and describe how different habitats provide for the basic needs of different kinds of animals and plants, and how they depend on each other identify and name a variety of plants and 	things can be grouped in a variety of ways explore and use	 describe the differences in the life cycles of a mammal, an amphibian, an insect and a bird describe the life process of reproduction in some plants and animals 	 describe how living things are classified into broad groups according to common observable characteristics and based on similarities and differences, including micro-organisms, plants and animals give reasons for classifying plants and animals based on specific characteristics

	 animals in their habitats, including microhabitats describe how animals obtain their food from plants and other animals, using the idea of a simple food chain, and identify and name different sources of food 		
Electricity		 identify common appliances that run on electricity construct a simple series electrical circuit, identifying and naming its basic parts, including cells, wires, bulbs, switches and buzzers identify whether or not a lamp will light in a simple series circuit, based on whether or not the lamp is part of a complete loop with a battery recognise that a switch opens and closes a circuit and associate this with whether or not a lamp lights in a simple series circuit 	 associate the brightness of a lamp or the volume of a buzzer with the number and voltage of cells used in the circuit compare and give reasons for variations in how components function, including the brightness of bulbs, the loudness of buzzers and the on/off position of switches use recognised symbols when representing a simple circuit in a diagram

		 recognise some common conductors and insulators, and associate metals with being good conductors 		
Light	 recognise that they need light in order to see things and that dark is the absence of light notice that light is reflected from surfaces recognise that light from the sun can be dangerous and that there are ways to protect their eyes recognise that shadows are formed when the light from a light source is blocked by an opaque object find patterns in the way that the size of shadows change 			 recognise that light appears to travel in straight lines use the idea that light travels in straight lines to explain that objects are seen because they give out or reflect light into the eye explain that we see things because light travels from light sources to our eyes or from light sources to objects and then to our eyes use the idea that light travels in straight lines to explain why shadows have the same shape as the objects that cast them
Forces	 compare how things move on different surfaces 		 explain that unsupported objects fall towards the Earth 	

	 notice that some forces need contact between 2 objects, but magnetic forces can act at a distance observe how magnets attract or repel each other and attract some materials and not others compare and group together a variety of everyday materials on the basis of whether they are attracted to a magnet, and identify some magnetic materials describe magnets as having 2 poles predict whether 2 magnets will attract or repel each other, depending on which 		because of the force of gravity acting between the Earth and the falling object • identify the effects of air resistance, water resistance and friction, that act between moving surfaces • recognise that some mechanisms including levers, pulleys and gears allow a smaller force to have a greater effect	
	depending on which poles are facing			
States of Matter		 compare and group materials together, according to whether they are solids, liquids or gases observe that some materials change state 		

		when they are heated or cooled, and measure or research the temperature at which this happens in degrees Celsius (°C) • identify the part played by evaporation and condensation in the water cycle and associate the rate of evaporation with temperature	
Sound		 identify how sounds are made, associating some of them with something vibrating recognise that vibrations from sounds travel through a medium to the ear find patterns between the pitch of a sound and features of the object that produced it find patterns between the volume of a sound and the strength of the vibrations that produced it 	

		recognise that sounds get fainter as the distance from the sound source increases		
Rocks	 compare and group together different kinds of rocks on the basis of their appearance and simple physical properties describe in simple terms how fossils are formed when things that have lived are trapped within rock recognise that soils are made from rocks and organic matter 			
Earth and Space			 describe the movement of the Earth and other planets relative to the sun in the solar system describe the movement of the moon relative to the Earth describe the sun, Earth and moon as approximately spherical bodies 	

		use the idea of the Earth's rotation to explain day and night and the apparent movement of the sun across the sky	
Evolution and Inheritance			 recognise that living things have changed over time and that fossils provide information about living things that inhabited the Earth millions of years ago recognise that living things produce offspring of the same kind, but
			 of the same kind, but normally offspring vary and are not identical to their parents identify how animals and plants are adapted to suit their environment in different ways and that adaptation may lead to evolution
